R.I. 04346470240

GREEN CERTIFICATION

In recent years, the environmental issues have gradually spread up to create a global awareness that has come to involve and to also rethink the places where we live and work.

This new vision leads to an even more pressing and sophisticated demand of products with high requirements of healthiness for humans and animals, with compatible features with the needs of environmental sustainability.

Our lime is not changed over time, is the human awareness who changed towards a conception more in harmony with nature. For decades, with its production, BeriCalce is part of this vision.

The ecological natural paints and all the lime-based products Luxury&LIME by BeriCalce, due to their innate nature, have a low environmental impact, are healthy and eco-friendly:

- They are in accordance with the regulations that restrict the emissions of harmful substance (VOC) in the atmosphere.
- Most of our products are VOC 0, the few remaining have VOC values largely lower than the permissible limits (the VOC values of our materials are declared in the respective technical charts under the sections "Products" and "Media" on our website).
- The only VOC present in some products is Propylene Glycol, that is widely used in the alimentary and pharmaceutical sectors.
- They do not contain aromatic solvents or other agents that can induce allergic reaction to people and animals, discomfort, or illness attributable to the "Sick Building Syndrome" (Sick Building Syndrome - SBS).
- They do not contain chemical preservatives or other types, for the simple reason that they do not need it.
- The high alkaline PH of the lime constitutes an excellent natural preservative.
- The lime-based products absorb the carbon dioxide (CO₂) present in the air, that happens through the carbonation, the hardening process which is slow over time and can go on for years, making the ambient where we live naturally healthier.
- The lime with its natural alkalinity has important anti-bacterial functions that associated its mineral origin make it breathable and unique of its kind.

At your disposal for any possible clarifications, I take this opportunity to extend my best regards.
